## MOUNTING KIT

x 1

two stroke  
hand pump

x 1

repair kit

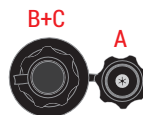

## VALVES.

### PREPARATION:

A - protective cap B - valve thread C - valve position

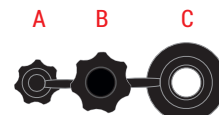

Inlet valve - closed

The valve is ready for pumping.

Only the top cap (A) is screwed  
on for pumping.

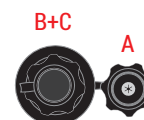

Valve completely unscrewed.

Air will be released  
completely.

Safety valve

## ASSEMBLY INSTRUCTIONS

The valve is ready for pumping

1

Open the zipper on the transport bag. Take the product out on a clean and stable surface.

2

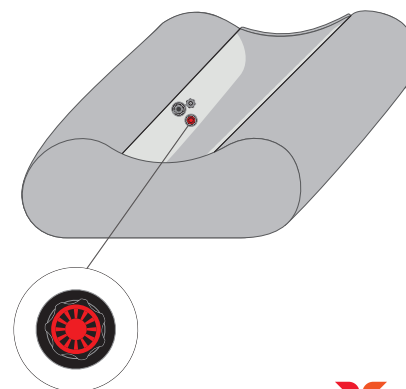

Prepare the valve for pumping. If the valve is unscrewed, screw the valve thread (B) into the base (C) in both air modules (the valves are located in their center).

3

Insert the end of the hand pump\* into the valve and start filling the counter with air. Inflate the product to the desired volume.

The pressure is regulated by a safety valve. The safety valve is located on the side.

The pumping limit will be indicated by the sound of air coming from the safety valve.

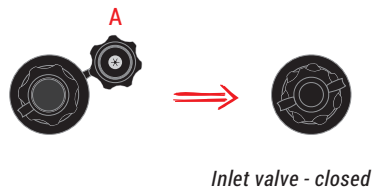

\* Optionally a dedicated electric pump

## ASSEMBLY INSTRUCTIONS

- 4** Tighten the cap (A) of the inlet valve and put the counter in an upright position

- 5** After placing the product vertically, check the position of the countertop and counter sheathing. If necessary, center the cover in relation to the top.

- 6** Slide the zippers on the cover and you can start using the counter.

- 
- 7\*** Installation of optional weights (balancing plates):
- Place the balancing plate on the feet at the base of the counter. Repeat the operation for the installation of the second plate.
  - Turn the plates vigorously to ensure that it sticks to the base firmly.

## DISASSEMBLY INSTRUCTIONS

- 1** Open the inlet valve and deflate both inserts

- 2** Do not disassemble the counter top! Fold everything up and put it in a cover.
